X-POLARISED, OMNI-DIRECTIONAL, LTE MIMO ANTENNA 698 - 3800 MHz, 3 dBi

#### **Product Overview**

The XPOL-1-5G is Poynting's second generation "V2" of this very popular Cross Polarised (XPOL), cellular band, 2x2 MIMO antenna. The addition of a 4X4 MIMO derivative is also available for user specific needs. The antenna has been completely redesigned from the previous generation with an all new enclosure and antenna design. The antenna now includes the newer 3400 - 3800 MHz bands as well as the in demand lower 698 MHz band, which were not previously covered by our V1 and is suitable for 2G, 3G, 4G & 5G. This antenna performs exceptionally well in the following frequency bands: 698 – 960 MHz, 1700 –2700 MHz & 3400 – 3800 MHz, with a peak gain of 3 dBi across the frequency bands of operation.

The radiation patterns of this antenna are omni-directional and exceptionally well controlled, further adding to the performance of the antenna. This makes the antenna perfect for most application areas, such as urban, rural, agricultural and commercial, to achieve the best possible coverage over a large area. The robust mechanical enclosure design makes the antenna weather, dust and vandal resistant and gives it an IP65 rating, suitable for harsh environments.

# Features

- New 3400 to 3800MHz, 5G band
- Broadband, including the latest 3.5GHz bands
- X-Polarised 2x2 or 4X4 MIMO Antenna
- Wall or pole mountable
- Lightweight & Rugged
- Weatherproof (IP65)
- High pattern consistency across bands for 4G/5G carrier aggregation

#### **Application Areas**

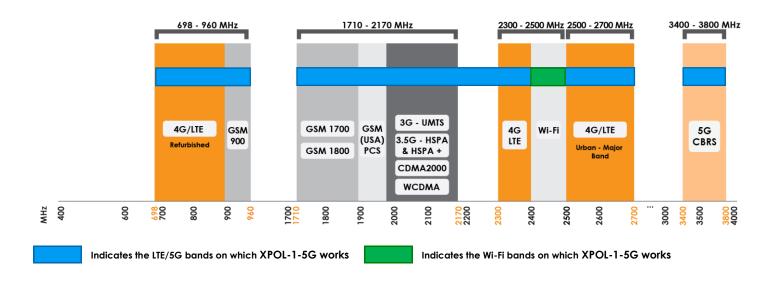

- Outdoor antenna for Fixed Wireless Access (FWA)
- Consumer LTE/5G internet connectivity
- Industrial & Commercial LTE/5G deployments
- Urban and household reception enhancement
- Agricultural & Farming LTE/5G data distribution
- Power, Energy & Water telemetry access
- Oil & Gas communication systems
- Municipal & Government systems
- Repeaters & coverage enhancement amplifiers

#### **Frequency Bands**

The XPOL-1-5G is an LTE MIMO antenna that works from 698 – 960 MHz | 1710 - 2700 MHz | 3400-3800 MHz

#### Antenna Performance Plots

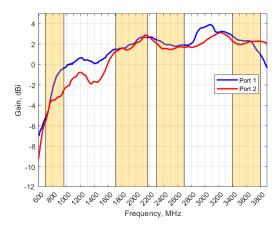

#### Voltage Standing Wave Ratio (VSWR)

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The XPOL-1-5G delivers superior performance across all bands with a VSWR of  ${\leq}2.5{:}1.$ 

#### GAIN (EXCLUDING CABLE LOSS

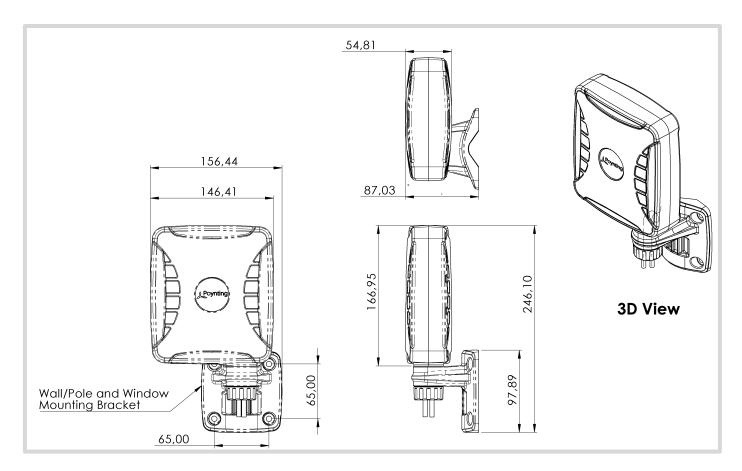

#### Gain\* in dBi

3 dBi is the peak gain across all bands from 698 – 3800 MHz

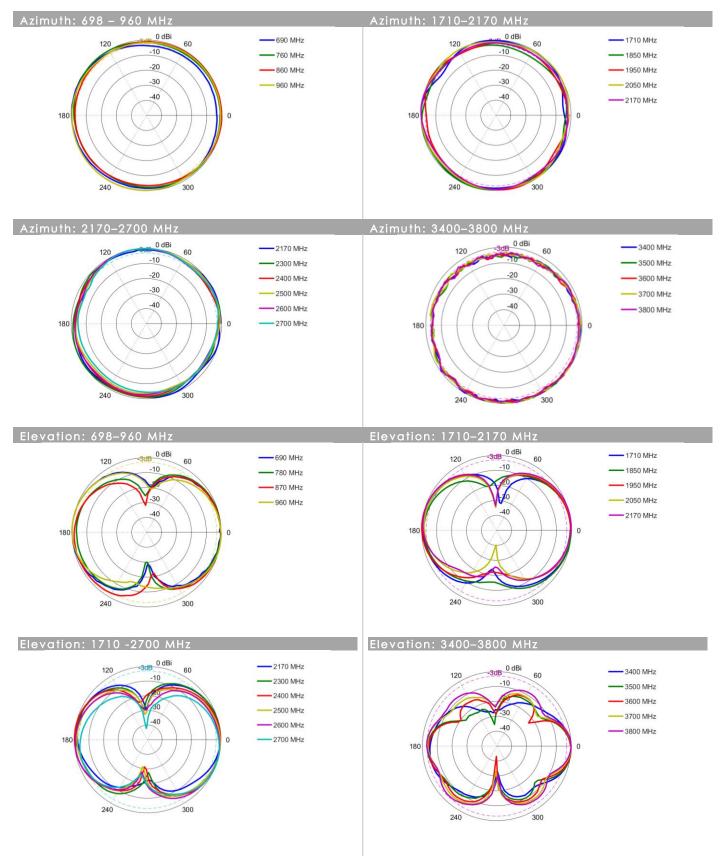

\*Antenna gain measured with polarisation aligned standard antenna
