SATEL

Mission-Critical Connectivity

Solving your challenges

SATEL is one of the world's leading experts and innovators of radio modems for wireless data communication. We are also the first manufacturer that brought wireless router to market.

Our solutions are used in wide range of industrial applications. We are known for our high quality and expertise. All the products are designed and manufactured in Finland.

Reliable connections, protected business

SATEL radio modems are easy and fast to implement and use, and have low life cycle costs.

The solutions we offer are also expandable, customizable, flexible and secure. You get added value from our services. We offer network design and technical support, and we have a wide distributor network at your service.

Environmental Monitoring

Wireless radio modems are one key aspect in Environmental Monitoring. Radio modems bring safety, operability and control. With SATEL's solutions you can monitor weather conditions and get information for example in flood, fire or drought situation. They provide real-time information of environmental conditions without additional costs and with a minimum supervision.

OEM

SATEL have produced a range of OEM radio modules for system manufacturers to integrate into customer solutions. They are secure, customizable and flexible in mounting options. SATEL's solutions are widely compatible and also support other manufacturers' radio protocols.

SCADA

SCADA system requires a highly reliable monitoring and controlling network. Malfunctions should be pinpointed quickly and even restored remotely. SATEL offers comprehensive solutions that are easy to implement and expand. SATEL radio modems are currently being used e.g. in electricity distribution, electric meter, windmills, waterworks, sewer networks, district heating and gas pipelines.

ITS

Intelligent Transport Systems are improving travel experience everywhere, and operational communication is a major factor in this. Private radio data network ensures the functionality of these applications. SATEL's radio modems are used in public transport e.g. in traffic light and traffic sign control, real-time passenger information system and automatic vehicle location.

GNSS

Accurate and up-to-date data transfer in precise positioning systems is vital. With radio modems the information is transferred wirelessly in real time. SATELLINE radio modems are used in GNSS RTK, remote measurement and control applications. They provide an independent solution based on quality, continuity and low life cycle cost. SATELLINE modems are used both separately and also as integrated into measurement devices.

The heart of the SATEL XPRS solution

SATELLAR IP radio modem is an excellent choice for data transfer for mission-critical applications requiring long range and the benefits of the privately owned networks.

The heart of the SATEL XPRS solution, the SATELLAR IP radio modem provides high availability connections with device and routing protection. The SATEL XPRS solution utilizes the interoperability of the SATELLAR radio modem with other communications technologies, as well as technology switchovers.

SATELLAR

SATELLAR radio modem is suitable for both serial and IP data networking in UHF frequencies. It provides a reliable data connectivity for applications that require stability, high availability and long range. It supports low latency networking and has easy remote management with intuitive user interface.

The SATELLAR consists of two separate modules, a radio unit and central unit. The radio unit alone can be used as a serial data radio modem and as a repeater in packet routing networks. When central unit is added to the radio unit, full TCP/IP functionality is obtained. Features such as remote monitoring & management, SNMP, NTP, data compression and serial data encapsulation provide a complete digital solution that takes into account all data transfer scenarios.

*** Network Management System**

SATEL NMS software can be used to set up a new radio modem network or modify an existing one. It is also an excellent tool for monitoring the condition of the radio network, and by setting different alarm levels it enables immediate reactions.

- Graphical tool for designing a radio network
- Enhanced reliability through advance indication of anticipated faults and failures
- Reduced configuration and maintenance costs through remote configuration
- Flexibility in adapting to customer protocols and applications

Meeting your needs

SATELLINE-EASy is equipped with wide tuning range and programmable channel spacing. It provides a compact and flexible solution for many different long-range applications. Wide tuning range and channel spacing are both easy to modify. The radio modem endures temperature changes from -25°C to +75 °C, and has a low power consumption.

SATELLINE-3AS Epic DB includes a high power (10W) transmitter and two receivers that improve the reliability of the connection when there are a lot of reflections and fading. The distances between two modems can be more than doubled with this model.

Software – Ready, steady, go!

(MS Windows compatible)

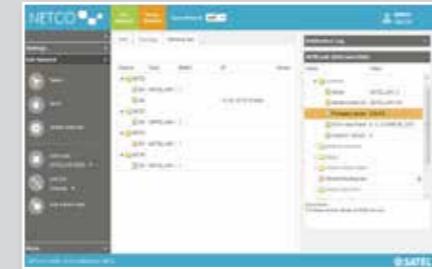

SaTerm

SaTerm is software, which can be used for configuration, testing, reprogramming and for updating the firmware of the SATELLINE-3AS Epic DB, -3ASd Epic DB, -EASy, -3ASd Epic Pro DB and -EASy Pro radio modems.

NETCO

NETCO is a intuitive and user friendly network configuration program for SATELLAR. It is designed to make configuration as easy as possible. With NETCO a fully functional communication network can be configured with a few simple clicks. It has SATELLAR-based network commissioning and it can configure large network (up to 5000 devices) without delays.

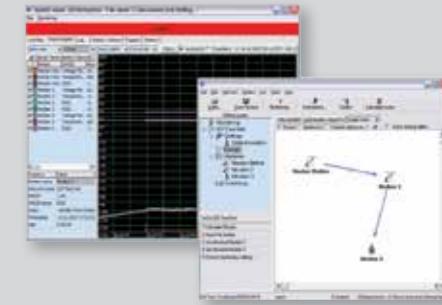

SATELLINK PC Pro

Point-to-multipoint program for driving SATEL I-LINK and i-LINK I/O-converters. Operate systems, which are connected to the I/O-ports, change values, collect pulses and monitor the radio link. For max. 127 slaves.

SATEL NMS PC

Network Management System software for creating and managing SATELLINE-3AS NMS, -3ASd NMS, -3AS Epic NMS, -3ASd Epic NMS, -3AS VHF, -3ASd VHF and SATELLAR networks, including the graphical design of topology and message routing or repeater functions, remote modification of settings, and logging and trending of field data.

Configuration Manager

SATEL Configuration Manager (CM) is available for SATELLINE-M3-TR1, -EASy, -EASy Pro, -M3-R3, -M3-TR3, -M3-TR4, -M3-TR8, -EASy 869, -M3-TR869, Compact-Proof and EASy-Proof products. The program makes it possible to edit the modem settings and update the firmware.

FCS Monitor

Free Channel Scanning Monitor program can be used for setting the FCS parameters and for loading them to modems and for monitoring the channels for noise or interference.

Help Editor

Help Editor can be used for creating and editing different language versions for Configuration Manager.

Channel List Editor

Channel List Editor program can be used for creating the channel list for Epic Pro modems.

Antennas & cables

Antennas

- Half Wave Antennas for frequencies 400 ... 470 MHz for short distances
- Quarter Wave Antennas for frequencies 400 ... 470 MHz and 869 MHz for short distances
- Helix Antennas for frequencies 400 ... 470 MHz for short distances
- Directional Antennas for frequencies 330 ... 470 MHz, 869 MHz and 135 ... 174 / 218 ... 238 MHz for long distances
- Omnidirectional Antennas for frequencies 330 ... 470 MHz, 869 MHz and 135 ... 174 / 218 ... 238 MHz for long distances.

Cables

- CRF-1 RG58 lenght 1 meter with TNC male / TNC female -connectors
- CRF-5F RG58 lenght 5 meter with TNC male / TNC female -connectors or CRF-5M TNC male / TNC male -connectors
- ECOFLEX10 low loss (0.9 dB / 10 m) cable for cable lengths over 20 meter with N or TNC -connectors.
- ECOFLEX15 low loss (0.6 dB / 10 m) cable for cable lengths over 20 meter with N -connectors.

We can also offer wide range of interface cables, for example:

- CRS-2M length 2 meter, includes power supply wires, with D15 / D9 male or CRS-2F female -connectors
- CRS-PB length 2 meter, includes power supply wires, with D15 / D9 male -connectors for RS-485 interface
- CRS-9 length 2 meters, with D9 male / D9 female -connectors
- CRS-TSU length 2 meters or 50 cm, with D15 male / D15 female connectors, to be used between SATELLINE-3AS or Epic radio modems and I-LINK 100

Type approvals

SATEL radio modems are type approved globally. Type approvals ensure frequency compatibility with other uses of the radio spectrum in a given country. The table on this page shows where SATEL modems are currently type-approved. If you would like to use a product that is not currently type approved with your national government, contact your local distributor. Your distributor may already be in the process of securing approval.
